

SPILL SORB

PILLOWS

[Absorbent GP \(General Purpose\)](#) pillows are ideal for absorbing, containing and controlling unwanted liquid spills ranging from oil and solvents to water and non-aggressive chemicals. Made from reclaimed wood pulp, they absorb liquids on contact through capillary action. The absorbed liquid is locked into cellulose fibers, preventing leaching and handling problems associated with polypropylene and clay sorbents. The performance attributes of Absorbent GP pillows make them ideal for industrial cleanup and spill control applications.

Available in:

Stock No.	Description	Items/Unit	Absorption Capacity/Unit (Gallons)/liters
42011	8" X 17" Fabric All Liquids	20/box	Up to 20G/75L
42012	17" X 17" Fabric All Liquids	10/box	Up to 18G/75L

Competitive advantages of [Absorbent GP pillows](#) over polypropylene and clay absorbents:

- Absorbs liquids within fibers vs. adsorbing liquids on fibers exterior only
- Absorbs immediately on contact
- Absorbs upto 2-3 times more volume than polypropylene absorbents, minimizes waste
- Absorbs upto 7 times more volume than clay sorbents.
- Retains the liquid absorbed; prevents leaching and draining of sorbed liquids
- Absorbs all liquids except strong inorganic acids and caustics
- Anti-static
- No free silica-prevents health problems(silicosis) associated with clay and diatomaceous earth
- Works in all temperatures, sub-freezing to hot
- 100% organic-environmentally friendly
- Increases options for disposal
 - Landfill – passes and exceeds Toxicity Characteristics Leaching Procedure(TCLP), Paint Filter Test – won't leach/drain, eliminates free liquid problems
 - Incinerable at low temperatures (industrial boilers, etc.)
 - Bioremediation – will break down to natural organic elements with use of microbial enzyme action
- Environmentally responsible from origin to disposal
- The environmentally alternative to polypropylene and clay
