

# Soft Gelatin Capsule Trays

- Trays are made of reinforced plastic material that provides a smooth surface so capsules aren't marked
- This material offers excellent dimensional stability and load carrying capacity without creep, distortion or warp.
- The trays withstand temperatures from -60° F. to +250° F. (continuous service) or +300° F. (intermittent service).
- Made of materials listed as approved in the Federal Register for direct food contact.
- Sides or ends, or sides and ends, are dropped so air can circulate over and around the capsules to speed drying in a secure stack.
- The plastic material eliminates hot spots caused by metal trays.
- A secure grip provides easy lifting with no sharp edges.
- All MFG Tray Company products are easily cleaned and sanitized with no cracks or crevices for contamination to hide.
- Easy incineration should contamination occur.

For additional information, please contact the pharmaceutical sales department of MFG Tray Co.
