Subject: Odorgone

Dear Kosh,

With my poor English knowledge I want to back you and your product "OdorGone".

We tested "OdorGone" several times in our laboratory and also at home. OdorGone is very effective to eliminate and neutralize bad odors. We tested it against chemicals with intensive odors, like for example ammoniac and kerosene, and it had a lasting effect. At home in kitchen and bathroom it works excellent, too.

We especially appreciate, that the product is natural and dissolvable in water, and save costs and environment concerning the clever idea with the small capsules and spray bottles.

The odor of OdorGone is very fresh, but not intrusively. We like the smell of both types of OdorGone, with **extra lemon fragrance** and without extra lemon, too. The application would improve critical situations during flight and ensure wellness of passengers.

I hope I could help you.

Best regards

Petra Bender

Testimonial Letter

This letter gives reference to the product **OdorGone** produced by **Chemtech International Inc.**

Malév has been purchasing OdorGone from the local agent of Chemtech since the 4th quarter of 2004 and will continue buying it in the future.

OdorGone in spray bottles was tested in 2004 on board of Malév aircrafts with good results. **It solved the malodor problems in the cabin and in the lavatories cost-effectively and natural way.** The product contains only natural oils, has soft and fresh fragrance, and doesn't contain alcohol. The cleaning staff and our cabin crew can use OdorGone freely before departure and during the flying time when needed.

With best regards.

ODORGONE

A new multi use spray for onboard use.

In-flight trials

Trials were launched on 27 February 2007

Service Brief

Product featured in myCABIN, Edition: **07/02/295** on the **27FEBRUARY 2007**.

1. Specific IFSC's were requested to assist the Product Development Department to test the effectiveness of this new product.
2. Once the IFSC's were contacted they were briefed personally by Carl Van Der Merwe regarding the uses of the product and the objective of the trials.

Questionnaires were compiled and were drafted to assist the IFSC's and passengers to provide feedback before a decision was made to procure the product.

SETUP OF QUESTIONNAIRES

1. Did the odor enhance the AIR QUALITY?
2. Does it feel STICKY after using on hands?
3. Does it leave STREAKS/STAINS after use on any surface?
4. Does the product LEAK once the cabin is pressurized?

COMMENTS were taken into consideration regarding the product.

General Feedback

Product cleans toilet areas and galley surfaces very well.

It also leaves a fresh smell in the cabin area.

Properties of the product also enhance hygiene.

ODORGONE	YES	NO
AIR FRESHNER	100%	
HAND STERILISER	100%	
MULTI SURFACE CLEANER	100%	

Feedback on Questions

1. AIR QUALITY enhancer? **YES**
2. STICKY on hands? **NO**
3. STREAKS/STAINS after use? **NO**
4. LEAK after cabin pressurization? **NO**.

ODORGONE will definitely be a valuable and positive product improvement onboard.

Testimonial Letter

This is to give references to the product ODOR GONE (Aircraft Odor Neutralizer) produced by Chemtech Intl. Inc.

Odor gone in spray-bottles was tested in 2003 on board of our aircrafts i.e. in the cabin and lavatories with positive results. Application of Odor gone in combination with usual cleaning products reduces the bad odour. Since January 2004 the utilization of Odor gone has been included in standard inflight service procedures of Czech Airlines.

It is used by cleaning staff for cleaning the aircraft cabin before flight departure and it is also available for cabin attendants to be applied during the flight when needed.

With best regards,

Testimonial Letter – OdorGone from Chemtech Int'l Inc., U.S.A.

From: Patricia Ellistone [mailto:patricia.ellistone@moray.gov.uk]

Subject: A new product – OdorGone Neutralizing malodors from kerosene

Importance: High

Hello,

I have been using a product called OdorGone supplied by Chemtech International Inc., U.S.A. as I have a particularly nasty problem with kerosene smells in the house following the rupture of a feed pipe to my boiler. The house smelled awful and the smell even clung to my clothes. I smelled like I had been sprayed with fly spray!

I tried every other aerosol and plug-in odour removing masking chemical based products on the market, with no success. I was desperate. I felt that my only solution was to have the affected saturated wall taken down and rebuilt (this is an old stone cottage with no proper conventional foundations, so the prospect was horrendous!) until I did a last ditch web search and came across OdorGone.

I e-mailed the supplier, Chemtech Int'l Inc., in the United States, who kindly gave me the UK agent's address. I bought an initial small amount to try, as I didn't hold out much hope that it would work and didn't want to waste too much money.

I thoroughly sprayed all the surfaces inside my boiler cupboard (including inside the boiler - not on the electrics, obviously) and poured it on the ground outside (which also stank of the spilt oil) and actually noticed a difference! I persevered with the spraying and pouring and now I have a garden that doesn't smell of heating oil and a boiler cupboard that I can use for drying clothes again.

Apart from being absolutely natural (made from plant oils) and non toxic, it is a liquid solution that can be poured on as well as sprayed which one can't do with any other product. OdorGone is also available in single portion Capsules for making up the solution at home so one doesn't have to buy a spray bottle every time - better for the environment.

I also used it to de-odorise the inside of a really musty old trunk and the inside of my wellies.

There isn't another product like this on the market and I can't recommend it highly enough. You should consider taking in to your product portfolio - it does what it says it will and more, as I can testify. Every home should have some!

Please have a look at the OdorGone on Chemtech's website www.chemtech-usa.com for all of the other applications - it really is versatile.

Very sincerely

Patricia Ellistone

Subject: Re: OdorGone Product

Hello again Kosh,

Thanks for the message. Confirm receipt of our order in good shape.

I used OdorGone for air/odor neutralization applications. So far OG does superbly well. Yes, I have my own design of atomization system comprising of a flow control and atomization unit. Most systems are currently installed in AHU and FCU at Building complexes and in Shopping Malls; some are exposed wall installed units. The focus is on food based odor, smoke odor and odor emanating from grease traps and grease processing rooms. The business is just growing since 3Q last year. Garbage centre is a small percentage of the business as it is the least demand the most competitive.

I have an incinerator plant customer and currently making efforts getting into waste water treatment odor control.

Over time we have created a market niche for ourselves. Hope to sustain and grow it more. Certainly this will result in more OG orders for you.

Next time, I will email u pix of my various treatment applications.

Let me know if you need further info or follow up any enquiries you might have from Singapore and around.

Thanks again and best regards

Muhd Mazlan
