

TESTIMONIAL LETTER TO CHEMTECH

I have known Chemtech International for the past nine years. When I first started the soft gelatin capsule manufacturing in 1996 we were utilizing imported fiber glass trays made by other companies that usually chipped, warped and were not quite suitable to manufacture soft gelatin capsules.

In 1996 Mr. Kosh Daphtary, President, Chemtech International gave me an introduction to a whole line of products quite useful for softgel production and these products included Molded Fiber Glass Co. FRP-Composite trays for drying soft gelatin capsules, Nest & Stack small boxes, and dollies. I am utilizing MFG products for the past nine years and very pleased with the performance of these products for their durability, ruggedness and usefulness.

In addition to the utilization of MFG products in our US facility, we utilize these products in our parent company, Strides Arcolab Limited, India, and Chemtech has supplied the MFG trays. Over the years Strides US and Indian facilities have purchased a few thousand trays from Chemtech International, who has provided excellent customer services to Strides softgel facilities.

As a manufacturer of soft gelatin capsules, we are very cost conscious. Chemtech has provided high quality MFG products, maintained consistent pricing over the years and offered us excellent customer service. From our experience we recommend the high quality MFG trays for drying soft gelatin capsules, and its supplier, Chemtech International Inc., to other pharmaceutical companies.

Nehru Gaddipati, Ph.D., R.Ph.
President, R&D
